FRAGRANCES

Fragrance is a mix of various aromatic substances in a solvent. For the majority of common fragrances the solvent used is alcohol. In addition, fragrance often contains a fixing agent.

Essential oils and other fragrant plant extracts such as tinctures, absolutes, resinoids and concretes are often used as ingredients in the production of a fragrance. Animal fragrances such as ambergris, musk, civet and castoreum are virtually no longer used.

Our fragrance oils are used as aromatic substances in a wide range of products, such as: cleaning agents, shampoos, creams, ointments, lotions, etc. They can be fantasy fragrances (e.g. "Atlantic freshness") or specific fragrances (such as "apple" or "pine").

Please contact us to discuss your requirements.
